APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
09/898,286	07/03/2001	Geoffrey Donald Tremain	1821-01100	2215
23505	7590	11/13/2006	EXAMINER SHIFERAW, ELENI A	
CONLEY ROSE, P.C. P. O. BOX 3267 HOUSTON, TX 77253-3267			ART UNIT 2136	PAPER NUMBER

DATE MAILED: 11/13/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/898,286	Applicant(s) TREMAIN, GEOFFREY DONALD	
	Examiner Eleni A. Shiferaw	Art Unit 2136	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 September 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-64 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-64 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. Applicant's amendments and/or arguments with respect to amended claims 1, 20, 37, 54 (all independent claims) have been considered but are moot in view of the new ground(s) of rejection.
2. The amendment for 101 rejection has been accepted and the Examiner's provisionally 101 rejection has been withdrawn.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-64 are rejected under 35 U.S.C. 102(e) as being anticipated by Wesinger, JR. et al. herein after (Wesinger) Pub. No. US 2001/0011304 A1.

Regarding claims 1, 20, and 54, Wesinger discloses an apparatus/method of providing for a plurality of customers (0012 lines 7-8, and 0050; *web users ... remote hosts*) one or more computer services selected from: file, data and archiving services; applications hosting services; database hosting services; data warehouse services; knowledge management hosting services;

digital media production services; "intellectual property" and streaming media services; simple web hosting services; complex e-Commerce web hosting services; high performance computation services; electronic messaging and conferencing services; and, learning neuro-computer services (0035; *web hosting services*); the method comprising the steps of:

setting up on a real computer (fig. 1; *web server physical machine*) at the request of each of said customers (0024 and 0026; *user connection request to connect and access...*) at least one virtual machine (fig. 1 *virtual host 1, 2, ... N*) for each of said customers, said at least one virtual machine for each of said customers having a specification determined in accordance with the computer service or services requested by said customer and being configurable by said customer (0035 and 0045-0053; *configuring multiple virtual hosts and/or client computers based on users preferences/budgets*), said at least one virtual machine having a **separate operating system running thereon (distinct and independent multiple virtual servers/hosts 1-n running in the same/single physical/real machine....and each multiple independent and/or distinct virtual servers are independently configurable in order to turn different capabilities.... it is inherent that the plurality of virtual hosts in the real server 100 runs different operating system because they are virtual hosts (see, evidence Wesemann 6,434,594 B1 col. 8 lines 9-40 that discloses a computer node running different OS to provide virtual processing resources).**

Regarding claims 2 and 21, Wesinger further teaches an apparatus/method, wherein plural virtual machines are set up within the real computer for at least one of said customers (fig. 1; *web server physical machine and VH1 ... VHN*).

Regarding claims 3 and 22, Wesinger further teaches an apparatus/method, wherein the or each virtual machine for at least one of said customers is connected to a virtual network set up for said at least one customer within the real computer (0021-0027).

Regarding claims 4 and 23, Wesinger further teaches an apparatus/method, comprising a virtual intrusion detection device for detecting an attack on the virtual network (The examiner takes an official notice on virtual intrusion detection as a well-known at the time of the invention was made because it would enable secure virtual network (see, Cisco News Release by San Jose pages 4-5).

Regarding claims 5 and 24, Wesinger further teaches an apparatus/method, wherein at least one virtual machine is connected to a virtual firewall that is connectable to an external network to which customers and/or other users can connect such that access to said at least one virtual machine by a customer or other user via a said external network can only take place through a virtual firewall (0025).

Regarding claims 6 and 25, Wesinger further teaches an apparatus/method, wherein the or each virtual machine for a particular customer is connected to a virtual firewall that is dedicated to that customer's virtual machine or machines, each virtual firewall being connectable to an external network to which each of said customers and/or other users can connect such that access to a virtual machine by a customer or other user via a said external network can only take place

through a virtual firewall provided for that virtual machine or machines (0039).

Regarding claims 7 and 26, Wesinger further teaches an apparatus/method, wherein each virtual firewall is set up within the real computer, the or each virtual machine for each customer being connected to a first port of the virtual firewall that is dedicated to that customer's virtual machine or machines, each virtual firewall having a second port connected to a virtual network that is set up within the real computer and that is connectable to an external network (0039).

Regarding claims 8 and 27, Wesinger further teaches an apparatus/method, wherein the second port of each virtual firewall is connected to the same virtual network that is set up within the real computer and that is connectable to an external network (0025).

Regarding claim 9, Wesinger further teaches an apparatus/method, wherein the or at least one of the virtual firewalls is implemented by a virtual machine on the real computer, said virtual firewall virtual machine running firewall software (0039).

Regarding claims 10 and 28, Wesinger further teaches an apparatus/method, comprising a plurality of real data storage devices and at least one virtual storage subsystem that is configured to allow said real data storage devices to emulate one or more virtual storage devices (0026).

Regarding claims 11 and 29, Wesinger further teaches an apparatus/method, wherein the at least one virtual storage subsystem is configured to emulate at least one respective virtual storage

Art Unit: 2136

device for each customer (0026).

Regarding claims 12 and 30, Wesinger further teaches an apparatus/method, comprising a detection device for detecting evidence of malicious software or hostile attack signatures on the at least one virtual storage subsystem (0025).

Regarding claims 13 and 31, Wesinger further teaches an apparatus/method, wherein the apparatus is configurable to provide at least one of the services selected from: file, data and archiving services; applications hosting services; database hosting services; data warehouse services; knowledge management hosting services; digital media production services; "intellectual property" and streaming media services; simple web hosting services; complex e-Commerce web hosting services; high performance computation services; electronic messaging and conferencing services; and, learning neuro-computer services (0035).

Regarding claims 14 and 32, Wesinger further teaches an apparatus/method, comprising virtual private network software to provide an encrypted communication channel for communication between at least some of said virtual machines (0053).

Regarding claims 15 and 33, Wesinger further teaches an apparatus/method, comprising virtual private network software to provide an encrypted communication channel for communication between at least one virtual machine and an external computer (0021-0024).

Art Unit: 2136

Regarding claims 16 and 34, Wesinger further teaches an apparatus/method, comprising virtual private network software to provide an encrypted communication channel for communication between a first virtual network and a second virtual network (0053).

Regarding claims 17 and 35, Wesinger further teaches an apparatus/method, comprising virtual private network software to provide an encrypted communication channel for communication between a virtual network and an external computer (0021-0026).

Regarding claim 18, Wesinger further teaches an apparatus/method, wherein the real computer comprises plural physical computers (fig. 1).

Regarding claim 19, Wesinger further teaches in combination, a first apparatus according to claim 1 and a second apparatus that is substantially identical to said first apparatus, the first and second apparatus being connected by a communications channel so that the second apparatus can provide for redundancy of the first apparatus thereby to provide for disaster recovery if the first apparatus fails (The Examiner takes an official notice wherein second apparatus for providing disaster recovery if the first apparatus/real computer fails. It is well known in the art at the time of the invention to have a backup server to recover a disaster when failure of a host server because it would provide an efficient service with out failing to provide user requests during power outage/system failure (see, Seagate software press releases 1997 pages 1-2).

Regarding claims 36 and 55, Wesinger further teaches the method, comprising the step of moving said at least one virtual machine from a first real computer to a second real computer (The Examiner takes an official notice again because to backup data during system failure the step of moving is necessary because it would recover data (see, Seagate software press releases 1997 pages 1-2)).

Regarding claims 56 and 59, Wesinger further teaches the apparatus/method wherein at least one of said virtual machines provides at least a virtual central processor unit (0021-0023).

Regarding claims 57 and 60, Wesinger further teaches the apparatus/method, wherein at least one of said virtual machines is created using a virtual machine abstraction program (0012).

Regarding claims 58 and 61, Wesinger further teaches the apparatus/method, wherein at least one of said virtual machines is created using machine simulation/emulation software (0023-0028).

Regarding claim 37, Wesinger discloses a method of operating a real computer (fig. 1; *web server physical machine*) on behalf of plural customers (0012 lines 7-8, and 0050; *web users ... remote hosts*), the method comprising the step of:

operating plural virtual machines (fig. 1 *virtual host 1, 2, ... N*) on the real computer (fig. 1; *web server physical machine*), each of said plural virtual machines having a specification specified by and configurable by a respective one of the customers in accordance with a

computer service to be provided by the virtual machine on behalf of that customer (0035 and 0045-0053; *configuring multiple virtual hosts and/or client computers based on users preferences/budgets*), said at least one virtual machine having a separate operating system running thereon so as to provide respective computer services to the respective customers **(distinct and independent multiple virtual servers/hosts 1-n running in the same/single physical/real machine....and each multiple independent and/or distinct virtual servers are independently configurable in order to turn different capabilities.... it is inherent that the plurality of virtual hosts in the real server 100 runs different operating system because they are virtual hosts (see, evidence Wesemann 6,434,594 B1 col. 8 lines 9-40 that discloses a computer node running different OS to provide virtual processing resources).**

Regarding claim 38, Wesinger further teaches a method, comprising the step of operating plural virtual machines within the real computer for at least one of said customers (fig. 1; *web server physical machine and VH1... VHN*).

Regarding claim 39, Wesinger further teaches a method, comprising the step of operating a virtual network for at least one of said customers within the real computer, the or each virtual machine for said at least one customer being connected to said virtual network (0021-0027).

Regarding claim 40, Wesinger further teaches a method, comprising the step of using a virtual intrusion detection device for detecting an attack on the virtual network (The examiner takes an official notice on virtual intrusion detection as a well-known at the time of the invention was

Art Unit: 2136

made because it would enable secure virtual network (see, Cisco News Release by San Jose pages 4-5).

Regarding claim 41, Wesinger further teaches a method, wherein at least one virtual machine is connected to a virtual firewall, the or each virtual firewall being connected to an external network to which customers and/or other users can connect such that access to a virtual machine by a customer or other user via a said external network can only take place through a virtual firewall (0025).

Regarding claim 42, Wesinger further teaches a method, wherein the or each virtual machine for a particular customer is connected to a virtual firewall that is dedicated to that customer's virtual machine or machines, each virtual firewall being connected to an external network to which each of said customers and/or other users can connect such that access to a virtual machine by a customer or other user via a said external network can only take place through a virtual firewall provided for that virtual machine or machines (0039).

Regarding claim 43, Wesinger further teaches a method, wherein each virtual firewall is set up within the real computer, the or each virtual machine for each customer being connected to a first port of the virtual firewall that is dedicated to that customer's virtual machine or machines, each virtual firewall having a second port connected to a virtual network that is set up within the real computer and that is connected to an external network (0039).

Art Unit: 2136

Regarding claim 44, Wesinger further teaches a method, wherein the second port of each virtual firewall is connected to the same virtual network that is set up within the real computer and that is connectable to an external network (0025).

Regarding claim 45, Wesinger further teaches a method, wherein at least one virtual storage subsystem is provided and configured to allow multiple real data storage devices to emulate one or more virtual storage devices (0026).

Regarding claim 46, Wesinger further teaches a method, wherein the at least one virtual storage subsystem is configured to emulate at least one respective virtual storage device for each customer (0026).

Regarding claim 47, Wesinger further teaches a method, wherein a detection device is used for detecting evidence of malicious software or hostile attack signatures on the at least one virtual storage subsystem (0025).

Regarding claim 48, Wesinger further teaches a method, wherein the services provided include at least one of the services selected from: file, data and archiving services; applications hosting services; database hosting services; data warehouse services; knowledge management hosting services; digital media production services; "intellectual property" and streaming media services; simple web hosting services; complex e-Commerce web hosting services; high performance computation services; electronic messaging and conferencing services; and, learning neuro-

Art Unit: 2136

computer services (0035).

Regarding claim 49, Wesinger further teaches a method, comprising the step of using virtual private network software to provide an encrypted communication channel for communication between at least some of said virtual machines (0053).

Regarding claim 50, Wesinger further teaches a method, comprising the step of using virtual private network software to provide an encrypted communication channel for communication between at least one virtual machine and an external computer (0021-0024).

Regarding claim 51, Wesinger further teaches a method, comprising the step of using virtual private network software to provide an encrypted communication channel for communication between a first virtual network and a second virtual network (0053).

Regarding claim 52, Wesinger further teaches a method, comprising the step of using virtual private network software to provide an encrypted communication channel for communication between a virtual network and an external computer (0021-0026).

Regarding claim 53, Wesinger teaches the method, comprising the step of moving said at least one virtual machine from a first real computer to a second real computer (The Examiner takes an official notice because to backup data during system failure the step of moving is necessary because it would recover data (see, Seagate software press releases 1997 pages 1-2)).

Regarding claim 62, Wesinger further teaches the apparatus/method wherein at least one of said virtual machines provides at least a virtual central processor unit (0021-0023).

Regarding claim 63, Wesinger further teaches the apparatus/method, wherein at least one of said virtual machines is created using a virtual machine abstraction program (0012).

Regarding claim 64, Wesinger further teaches the apparatus/method, wherein at least one of said virtual machines is created using machine simulation/emulation software (0023-0028).

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eleni A. Shiferaw whose telephone number is 571-272-3867. The examiner can normally be reached on Mon-Fri 8:00am-5:00pm.

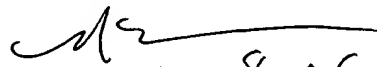

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nasser R. Moazzami can be reached on (571) 272-4195. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
